Don,

Thursday afternoon is pretty ugly for me; I'm in meetings from 12:30 to 6:00 EDT. Friday might be better.

Thanks,  
Howard

Will be in Boston tomorrow so later in the week is better. I'd like to rework Kate's draft before we talk to be responsive to Jeremiah's e-mail but won't be able to do so until Thursday.

Bob,

Kate and I would like to discuss this with you. Both she and I have particularly crazy days tomorrow, so perhaps Thursday morning or Friday? Given Jeremiah's note that he will be out of the office for the remainder of the week, it appears we have a bit of time.

Thanks,  
Howard

**Subject:** Deliverables

Bob-

The following are the deliverables committed by the state based on our previous conversation:

### **DEQ Proposal**

The Wyoming Department of Environmental Quality (WDEQ) is proposing to undertake further investigation into citizen complaints regarding groundwater quality issues within the Pavillion Field. To this end, the WDEQ proposes to: review the body of information available for the domestic water wells within the Pavillion Field; collect two (2) additional rounds of groundwater quality sampling from select domestic water wells (pre- and post- irrigation season within a twelve (12) month period); complete an inventory of potential sources of contamination within identified Areas of Interest associated with the selected water wells; evaluate water well construction and maintenance, and; evaluate the data, conclusions and recommendations developed from the wellbore integrity and the legacy pit studies prior to issuing its final report.

**\*\*We are working on the independent expert piece.**

### **Pits - Final Report**

The WOGCC will develop a report that includes technical and regulatory analysis concerning the use and reclamation of pits in the Pavillion Field. In developing its report, the WOGCC will solicit additional, relevant data from the WDEQ, EPA, and BLM, as necessary, in order to complete its technical and regulatory analysis. The report will summarize the results of the Pits Working Group research records, determine historical pit locations, and recommend site investigations and/or reclamation of pits. The WOGCC will determine if the site investigations and completed reclamation was sufficient to protect those water supply wells within 1320 feet of the pit locations.

The WOGCC reserves its rights to require any action consistent with its authorities under existing statutes, rules, and regulations.

### **Water Load-Out Station in Pavillion**

The Wyoming Water Development Commission will conduct annual testing and analysis of the water load-out station in Pavillion for \_\_ years. This analysis is not considered an element of the WDEQ's investigation into groundwater quality issues within the Pavillion Field.

I will be on the road for the remainder of the week (weather dependent), but in all of next week if you would like to discuss.
